

## AMENDMENTS TO THE CLAIMS

Claims 1-31 (Cancelled)

32. (Currently amended) A broadcast data receiving device for receiving and outputting broadcast data including a plurality of multimedia data, said data device comprising:

a receiving unit operable to sequentially receive the plurality of multimedia data included in the broadcast data on a designated broadcast channel;

an outputting unit operable to output the received multimedia data;

a storing unit operable to create and store management information for collectively managing the plurality of received multimedia data and attribute information corresponding to respective multimedia data; and

a managing unit operable to manage the received multimedia data with reference to the management information.

33. (Previously presented) The broadcast data receiving device according to claim 32, wherein the attribute information is included in the broadcast data.

34. (Previously presented) The broadcast data receiving device according to claim 32, wherein the attribute information includes information indicating data type of the multimedia data, and

wherein said managing unit is further operable to refer to the management information and change a process for outputting the received multimedia data according to the data type.

35. (Previously presented) The broadcast data receiving device according to claim 34, wherein the data type includes at least an HTML format.

36. (Previously presented) The broadcast data receiving device according to claim 33, wherein the attribute information includes start-up information of the multimedia data.

37. **(Currently amended)** A broadcast data receiving method for receiving and outputting broadcast data including a plurality of multimedia data, said method comprising:

sequentially receiving the plurality of multimedia data included in the broadcast data on a designated broadcast channel;

outputting the received multimedia data;

creating and storing management information for collectively managing the plurality of received multimedia data and attribute information corresponding to respective multimedia data; and

managing the received multimedia data with reference to the management information.
